

----- FOR IMMEDIATE RELEASE -----

New USB PC Kit for Delmhorst Moisture Meters!

By popular demand, the Delmhorst PC Kit has been upgraded to make it easier than ever to download stored readings from your moisture meter to your computer. The new PC Kit connects directly to your USB port, and because it draws power directly from your computer it no longer requires a bulky power supply.

Each kit also comes with an installation CD containing our Delmhorst Universal Application Program, but in case you ever find yourself away from your office computer, you can also download the new program from our website. Just head over to www.delmhorst.com/support_application.html and click on the appropriate download link to get started.

We hope this introduction demonstrates our commitment to customer satisfaction, and that you will continue to feed us your suggestions on how we can serve you better. To find out more about this new and improved accessory, or our full line of moisture meters, visit the Delmhorst web site at www.delmhorst.com.
