

----- FOR IMMEDIATE RELEASE -----

## ***Prepare for the Winter Season with Delmhorst Moisture Meters!***

According to experts, this winter season will be snowier and colder than normal. With that weather comes the risk of water damage due to pipes freezing and bursting. To avoid the scramble that comes from being unprepared, Delmhorst is encouraging water damage restoration professionals to purchase moisture meters now.

As any restoration professional knows, it is vital to have the right tool for the job. To keep track of water damage restoration efforts, Delmhorst offers the **Navigator Pro** which stores moisture content data the way you collect it, one room at a time. Navigator Pro is also a 3-in-1 meter with pin mode, pin-less scan mode, and a thermo-hygrometer that calculates temperature, RH, GPP, and dew point.

Delmhorst distributors can be found in every corner of the country, and are stocked with Navigator Pro and the full line of restoration moisture meters. To find a distributor near you, visit our dealer locator section of our website at the address below. Made in the USA for over 60 years, Delmhorst moisture meters are designed for success and made to last.
